

CONTENTS

<i>Sorrenti M., Di Sciuva M., Majak J., and Auriemma F.</i> Static response and buckling loads of multilayered composite beams determined using the refined zigzag theory and the higher-order Haar wavelet method.....	3
<i>Sheshenin S. V., Artamonova N. B., Klement'ev P. D., Kiselev F. B., Muradkhanov R. R., Orlov E. A., Zhang Qiang.</i> Study of the elastic and elastoplastic properties of a dispersed composite based on computational experiments.....	27
<i>Pupurs A., Loukil M., and Varna J.</i> Bending stiffness of damaged cross-ply laminates	45
<i>Buslaeva O. S., Sapozhnikov S. B., Bezmelnitsyn A. V., Ignatova A. V., Kudryavtsev O. A.</i> Thin indicator films to assess the residual strength of a GFRP after a local contact action	69
<i>Tupciauskas R., Veveris A., Andzs M., Gravitis J., Liitia T., and Tamminen T.</i> Investigation of a grey alder particleboard bonded by different industrial side-stream lignins	83
<i>Uymaz B.</i> Buckling characteristics of FGM plates subjected to linearly varying in-plane loads	97
<i>Sahu P. and Gupta M. K.</i> Dynamic mechanical properties of a biocomposite reinforced with sodium-bicarbonate-treated sisal fibers at different frequencies	113
<i>Kondratiev A. V. and Gaidachuk V. E.</i> Mathematical analysis of technological parameters for producing superfine prepregs by flattening carbon fibers.....	125
<i>Gao D. Y., Yao W. X., Wen W. D., and Huang J.</i> Equivalent spectral method to estimate the fatigue life of composite laminates under random vibration loadings.....	139
<i>Yu T. C., Nie G. J., Zhong Z., Chu F. Y., and Cao X. J.</i> Analytical solution of the bending problem for rectangular orthotropic plates with a variable in-plane stiffness	161
Notes for contributors	175

CONTENTS

<i>Janeliukstis R. and Mironovs D.</i> Smart composite structures with embedded sensors for load and damage monitoring. A review	189
<i>Shil'ko S. V., Chernous D. A., Panin S. V., and Choe H.</i> A method for predicting the parameters of plastic deformation of dispersedly reinforced materials by using a modified Mori–Tanaka model.....	223
<i>Akbarov S. D. and Bagirov E. T.</i> Dispersion of torsional waves in a hollow bilayered cylinder with initial inhomogeneous thermal stresses	233
<i>Davar A., Azarafza R., Fayez M. S., Fallahi S., and Jam J. E.</i> Dynamic response of a grid-stiffened composite cylindrical shell reinforced with carbon nanotubes to a radial impulse load	261
<i>Atlukhanova L. B., Kozlov G. V., and Dolbin I. V.</i> Theoretical estimation of the shearing strength of polymer/carbon nanotube contact: A fractal model.....	291
<i>Yao L., Wang Sh., Meng X., and Zhang Ch.</i> Numerical and experimental investigation of the burst resistance of glass-fiber thermoplastic composite pipes under internal pressure	299
<i>Nurullaev E. M.</i> The influence of γ -radiation on the structure and mechanical characteristics of a polymer composite material based on low-molecular rubbers	319
<i>Mironov A., Doronkin P.</i> An analysis of sensitivity of the monitoring system of helicopters to faults of their blades	331
<i>Khan M. ZR., Srivastava S. K., and Gupta M. K.</i> Characterization of TiO ₂ microparticle-blended polymer-based hybrid wood particulate composites	351
<i>Yin D. Ya., Zhu Ch. F., Chen X. Ch., and Bao J. S.</i> Finite-element analysis and an experimental study into the water jet reaming process of carbon-carbon composites.....	365
<i>Shebanov S. M.</i> Extreme values of the strength of single filaments and threads of a paraaramide fiber after its treatment by a water suspension of carbon nanoparticles.....	381

CONTENTS

<i>Sheshenin S. V. and Yikun Du.</i> Homogenization of rubber-cord layers at moderately large deformations.....	395
<i>Malakhov A. V., Polilov A. N., Li D., and Tian X.</i> Increasing the bearing capacity of composite plates in the zone of bolted joints by using curvilinear trajectories and a variable fiber volume fraction.....	411
<i>Mitrofanov O.</i> Evaluation of the buckling stability and geometrically nonlinear behavior of square composite panels of an unsymmetrical structure in shear	429
<i>Ślawski S., Kaczmarczyk J., Szymiczek M., and Pakieła W.</i> Numerical studies on the influence of a reinforcing material on the energy absorption in a multilayered composite during impacts	441
<i>Aydın L., Artem H. S., and Deveci H. A.</i> Single- and multiobjective optimizations of dimensionally stable composites using genetic algorithms.....	457
<i>Lvov G. I.</i> Using the concept of imposed constraints in the plasticity theory of composites	481
<i>Chepurnenko A. S., Litvinov S. V., and Yazyev S. B.</i> Combined use of contact layer and finite-element methods to predict the long-term strength of adhesive joints in normal separation	501
<i>Gilev V. G., Rusakov S. V., Chudinov V. S., Rakhmanov A. Yu., and Kondyurin A. V.</i> Modeling the curing kinetics of an epoxy binder with disturbed stoichiometry for a composite material of aerospace purpose	517
<i>Li Y. D., Luo H. B., Yan Y., Ye J. X., and Guo F. L.</i> Experimental and finite-element analysis of metal-inserted filament-wound composite tubes	535
<i>Bakar M., Przybyłek M., Bialkowska A., Żurowski W., Hanulíkova B., and Stoček R.</i> Effect of mixing conditions and montmorillonite content on the mechanical properties of a chloroprene rubber	553
<i>Xiao Y., Li Zh., Liu Zh., Zang M., and Zhu Y.</i> Effect of material design and weak link setting on the energy absorption of composite thin-walled beams under transverse loading	573
<i>Jiang Y. P., Wu J., and Zhu Y.</i> A mesoscopic model for particle-filled composites with network microstructures.....	591
